Corporate Profile

Founded in 1999, ENC Testing Inc. is an Alberta based geotechnical testing firm with a passion for success and a team of focused professionals who take pride in what they do and how they do it, in all aspects of their responsibilities. We are dedicated to our client base working within a 3 hour radius from our home office in Sherwood Park, Alberta, as well as from our remote office located in Cold Lake, Alberta. We offer a range of specialized services to our clients that include:

- Geotechnical Investigations
- Geotechnical Engineering
- Field Inspection and Testing
- Laboratory Testing
- Materials Engineering
- Residential Engineering

We provide geotechnical investigations and geotechnical engineering utilizing **GeoProbe MacroCore** and **Cone Penetration** technology with our Geoprobe 540UD drill rig. Our state of the art laboratory facility allows us to provide quality test results in a timely manner at competitive rates. Just a few of the tests available include:

- Nuclear Density Testing
- Standard Proctor / Modified Proctor
- Concrete Testing
- Marshall Analysis
- Sieve Analysis
- Grain Size Analysis
- Atterberg Limits
- Sulphate Content
- Unconfined Compressive Strength Testing
- Permeability Testing and In-Situ Permeability Testing

ENC Testing's well trained team members are available for on-site testing and inspection services year round. Our employee's technical training coupled with on-site training and experience results in a quality product every time.

We **Excel** in servicing
the **Needs** of
our **Customer!**
